

## Interactive Ajax map

Interactive Map Search

New Feature: Interactive Map Search

Now each College has its own Interactive Map, based around the AJAX technology.

When the Map Feature is selected, the user is taken to a map of the college and the surrounding area.

Here one can search for anything on or around campus by entering a query into the search box.

The feature comes preloaded with Recommendations, such as: Coffee shops, Pizza, and local restaurants, to name a few.

The map will list what the user inputs in the search box, starting with what's closest to Campus.

Screenshot:

Satellite View also available!

User can choose between the default map view or actual Satellite photo of the specified area.

A great tool for all students!
